What does Go-Live really mean?

Discussion: Go-live is May 12th as far as getting paperwork to CDC. Mi has a roll-out plan, when you are on VIM and ordering from McKesson that is when you go live. Phasing out depot approximately June 30th. E-ordering not completed or finalized. Programmers putting in a lot of time. Scheduling provider trainings. Want LHD's to go on first. Each LHD & MCIR Region do things differently. Aren't encouraging private provider trainings before June. Sue Schryber mentioned that 2 LHD's have transfers. They wanted to rollout private providers soon. Therese Hoyle said there is not a long wait for transfers, it is being tested now. E-ordering is being delayed because of transfer. Transfers will be out before e-ordering. Accommodations for large health system new EMR. Roxann mentioned to Therese to keep in mind insight program putting "P" in MCIR before providers. "P" will transfer over. Will need to remember the "P" if there is a recall.

Conclusions:

Action items: A call will be scheduled next week for transfers. Dave and Sharon will distribute a 27 step process they created. Dividing workload over the next couple of months at MDCH to ensure that orders go in. Double training VM & CD. Two options; phone trainings for e-ordering or online training.

Dosese Administered Reports

Discussion: In cycle 4 for accreditation reports are included. Bee on VM 90 days prior to accreditation. During transition some would have transitioned, some doing it manual. Forego sending in private doses administered,. June 15th is the last report that needs to be turned in. Difficult for private providers reports as some will be transitioned others not. Start back up electronically. Put together document with all these changes. Do not need to print out DA reports. Spending time correcting their reports. Do they submit documentation to us to show errors. Document any dose given in error, approve order. Biologic reports will not be sent after transition. Jaime region 2 – LHD's up for cycle 4 need to be on VIM 90 days prior to their accreditation. 5 out of 15 counties on transfer. Kathy region 5 – live beta tester. Biologic Inventory Report These will follow up on this. Denise – Dickinson – will use their depot until everyone is on VIM. Order form went out last Friday. Private providers should not order from MDCH until transition. Mark – order form Trihibit missing, not available now. Hep B duplicate on form. Connie received a varicella form not signed at the bottom. This needs to be signed and dated for verification. When orders come from McKesson the outside only gives refrigeration instructions. The inside will contain a notice. Obtain labels from drug reps. Macomb intended on sending in one order for May and June. If you have transferred to new VIM if should be on 2 orders. Depots should not populate before they go to VM.

Conclusions:

Action items:

Person responsible:

Deadline:

Other questions?

Discussion: Vaccine delivery location if coming to central ordering see post shipping receive forms. Brochure action items, contact list with scenarios to help with difficulties. Pat – Oakland – asked if MCIR depot is established and an old VM won't have ?????? Denise – Dickinson – realized using old form. Should send in 2 orders on new forms if you are transitioned. Active dose records for VFC should be kept 3 years past expiration. Depot site in MCIR – for clerk who distributes – they should enter doses for each individual doctor and maintain each database until all are transitioned.

Conclusions:

Action items: Keep web-site updated

Person responsible:

Deadline:

DCH
